Think you're covered for income loss?

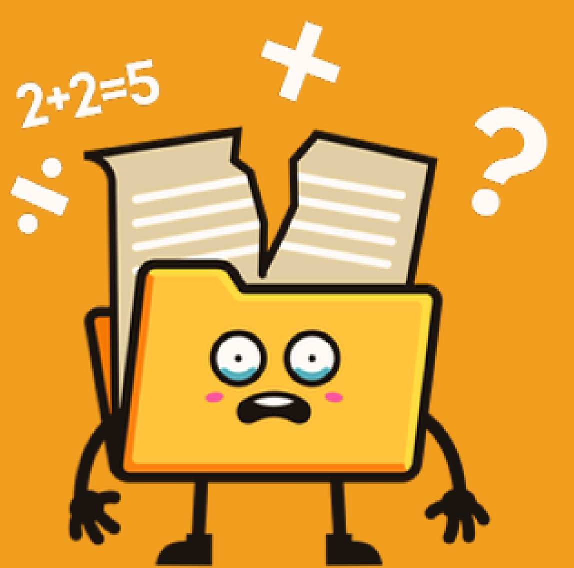
Think again.

Fact: Many businesses we work with discover, after a major loss, that their business interruption (BI) limits are significantly too low and don't fully reflect the scope of their operations.

These coverage gaps are often discovered after a loss, limiting recovery at the worst possible time.

Calculating BI limits can be complicated. It requires a clear understanding of both financial data and policy structure.

Protect your income. Use Roper and get it right.



The Reality:

BI Worksheets don't work

The worksheets insurers rely on are inherently limited. They capture information in isolation and often fail to reflect how a business truly operates. The result can be understated limits, compressed recovery periods, and missed coverages - leaving businesses underinsured.

You Don't Have to DIY Your BI

Our reviews are the better way. Let us do it for you. Saving you time and getting it done right.

You Can Either

- Complete the BI worksheet yourself and risk under-insuring your income.

OR

- Let Roper Valuation do it for you at minimal cost.

We Make Sure You're Fully Covered

Getting an accurate BI number is as easy as:

1. Start a Desktop BI Review HERE
2. Gather insurance and financial documents (we can guide you through this)
3. Upload the documents to our secure site

That's it.

For less than you'd spend on a business dinner for 4**, we provide you with the proper business interruption limits and supporting documents to give to your broker.

Trust Roper Valuation

Nick Roper, CPA, CMA, and CIP, is the founder of Roper Valuation. An insurance and accounting expert, he's seen too many business owners get too little in claims payouts because of flawed BI worksheets. Tired of seeing this, he developed a proprietary method to accurately calculate business interruption coverage.

Desktop BI Reviews are limited to businesses that fall within the intended scope, including size, industry, and type of operation. Larger or more complex operations require a more consultative approach, which is provided through our Advisory Services.
**Price is per location and is subject to change.

In addition to pre-loss BI valuations, Roper provides forensic claims support when losses occur. We work alongside brokers, insurers, and insureds to quantify business interruption losses, support claim presentation, and help ensure recoveries align with policy intent and actual operational impact.

We are ensuring businesses are properly covered for BI.
